Target version:			
Description One flaw which could may be enhanced. Look at the code below which contains a "case begin" Procedure CheckCase Case Begin Case (sAnimal = "Cat") Move ("Meow") To sNoise Case Break Case (sAnimal = "Dog") Move ("Arf") To sNoise Case Break Case (sAnimal = "Bird") Move ("Tweet") To sNoise Case Break Case Else Move ("") To sNoise Case End End_procedure I think it should format as Procedure CheckCase Case Begin Case (sAnimal = "Cat") Move ("Meow") To sNoise Case Break Case (sAnimal = "Dog") Move ("Arf") To sNoise Case Break Case (sAnimal = "Bird") Move ("Tweet") To sNoise Case Break Case Else Move ("") To sNoise Case End End_procedure see also: https://support.dataaccess.com/Forums/showthread.php?63084-Release-Source-Code-Tools&p=336354#post336354
