Description Reported on behalf of Bengt: There the indent and clean up parts have been put together and everything is done in one operation. Most functions are pre-selected in DfRefactor. However, I want to do the changes step by step and file by file when I work with each file. Is there a possibility to save the selections you make in DfRefactor. Now, 13 functions are pre-selected every time you enter the program. https://support.dataaccess.com/Forums/showthread.php?64859-DfRefactor-possibility-to-save-settings
