The Hammer - Bug #165

dbBldr and dbExplore in database menu open from current workspace instead of selected workspace

Description

Bob Worsley reports that:

I have 19.0 workspace ABC open with the Hammer and am editing some of the source. I put that aside and opened a different workspace named "DEF" with the 19.0 Studio, edited one of the tables, saved it, recompiled the app and then later went back to the Hammer in the NRC workspace. I then began trying a few things and opened dbBldr & dbExplore via the "Database" menu in the Hammer. Much to my surprise they both opened in the "DEF" workspace as did the Code Maintenance progam
