| Jose reports the following:   |        |                        |            |
| <pre>"Send Method of oObject (oObject(Self))" got changed to "Send Method of oObject oObject)"<br/>"Get Function of oObject (Current_Record(oDD(Self))) (Value(Form1(Group1(Self)), 0)) to nVariable"<br/>"Get Function of oObject Current_Record(oDD)) (Value(Form1(Group1(Self)), 0)) to nVariable"<br/>Send Method to (oObject(Self)) (oObject(Self)). It changes the first Self, but not the second.<br/>"If table.field ne "" Set Value of (Form1(Self)) Item 0 to table.field" got changed to "If table.field ne "" Set Value of Form1) Item 0 to table.field" (Yes, two spaces between "of" and "Form1")<br/>Not a DfRefactor problem: "Get Field_Current_Value of (oDD(Self))Field table.field to sVariable" (it worked) got chagend to "Get Field_Current_Value of oDDField table.field to sVariable" (don't compile)<br/>It doesn't parse commented lines<br/>Send method of (oObject1(oObjectN(Self))). It doesn't detect this. Not a problem, in this case the solution is not only quit (Self).<br/>"Send Method (Value(oObjeto(Self)))" got changed to "Send method Value(oObject)"</pre> |        |                        |            |
