

COM Manifest Manager - Bug #3

Not recognizing a registered COM component.

Description			
<p>I selected a .dll COM component in the "Create New Manifest Fragment File" dialog, then clicked "Check". The returned msg was that was not registered, but I knew that is was registered. After digging I found the problem. There was a difference in case.</p> <p>I changed one line of "IsCLSIDRegisteredFromCOMComponent" method in the "cManifestSideBySide" class.</p> <p style="padding-left: 40px;">Move (<i>Uppercase(sValue)</i> contains <i>Uppercase(sCOMComponentFileName)</i>) to bRegistered</p> <p>Bold text is what I added.</p>
