<b>Description</b>			
<p>This might be codemax specific and as such is low priority.</p> <p>When you get a suggestion list after typing "function" it helps well when you are augmenting an existing function. When you create a new function however I think the drop down should disappear by itself after you are 3 characters past a match. Eg. "function add" in a TabDialog class shows: Add_Tab_item as first (and only) match.</p> <p>Once you typed "function addNew" the drop down can already be removed as it is very unlikely to be needed.</p> <p>The reason for the "3 character" limit to remove is simply an idea, there might be better mechanisms to detect the list is not needed. For example disappear after 1 character past a match is OK if you can make it reappear if you backspace until there's a match again.</p>

- Status changed from New to Rejected

Scintilla autocomplete lists have this functionality built in.  
So it is not a problem as far as I am concerned.
